

## Chapter 2, Exercise 1

Question 5	Answer
A What does the <b>div</b> element represent?	The <b>div</b> element defines a division or a section. It's often used as a container for other HTML elements for styling and / or to perform tasks using Javascript.
B What is the <b>div</b> element used for?	The <b>div</b> element is used to divide a page into separate sections.
C Why do HTML5 webpages use fewer <b>div</b> tags than HTML4 pages?	HTML5 introduced several semantic elements with standardized names. These tags are also called structured or layout elements.
D Why is the <b>div</b> element still used in HTML5?	The <b>div</b> element is still used for the main section of webpages. W3C introduced the <b>main</b> tag after the other elements and some browsers still did not support it at writing of the text book.
E Why is the <b>id</b> attribute almost always used with the <b>div</b> element?	The <b>id</b> attribute is used to name <b>div</b> elements.
